

CASINOPASS[®]

The following descriptions are derived from the U.S. Utility Patent for a 'Gaming Smart Card' provided to Card Logistics, and internally designated and trademarked by Card Logistics as the CASINOPASS[®] Card System. While these descriptions are not in the same order or exact text (the actual text is in 'patent examiner language') as listed within the Allowed Claims for this Patent, they summarize the intent of the Patent. There are actually 12 (twelve) separate claims within the USPTO allowances, to include broad coverage of capabilities and options required for significant control of the rights within this market. The Utility Patent for these claims was formally issued by the USPTO on 21 July 2009 and is Valid into 2027.

- The gambling information storage device is comprised of a computer readable medium (which could be a smart card and/or chip, but is not limited to this format), a processor, and an interface unit for use in gambling.
- The gambling information storage device utilizes an external reader device able to effect a change in stored information. The internal processor performs operations on authorization data received from the external reader device to verify that the external reader device is an authorized device to effect the change in stored information.
- The gambling information storage device stores information including at least one of: an authorization number used to approve play at said gaming unit, a personal identification number, a transaction number that is used for all games of chance initiated using the account card, player identification information, player tracking information, an encrypted combination used by a door access device to unlock a door, access to complimentary amenities, an authorization number that is used to authorize wireless gaming, an authorization number that is used to authorize sports wagering, an authorization number that is used to authorize fantasy sports wagering, dining accounts, purchases, access to spa and health facilities, entertainment, and recreation.
- The gambling information storage device allows a person to participate in at least one of the following: slots, roulette, poker, blackjack, craps, baccarat, Caribbean poker, video poker, bingo, lottery, keno, fantasy sports game, and wireless gaming devices.
